

Comprehensive Nursing Course Support

Most nursing students have heard that the first year is the hardest. It is a year full of sleepless nights and get [NR 504 Week 5 Leading a Culture of Excellence Paper](#).

What's the secret to getting through it? Having the right resources. This video will share helpful tips to excel in your comprehensive nursing course. These helpful tips include: 1. Study With Others.

1. Review Your Exams

Ensure students are ready for the NCLEX with the help of HESI. The innovative practice exam solution uses real-time data and adaptive content to deliver a personalized learning experience that improves NCLEX preparation, exam scores and nursing [nr505 61331 week 2 picot worksheet assignment](#) knowledge.

Examine the impact of alterations in normal physiological functioning caused by disease process. This course will explore the clinical manifestations of diseases and their impact on the individual, family, community, and society.

Students develop nursing skills to provide care for the individual in a clinical setting. Emphasis is placed on utilizing the nursing process, critical thinking and therapeutic communication with clients.

2. Study With Others

As you prepare to take your next round of nursing exams, it's a good idea to find or build a study group. Studies show that students in a study group retain more than those who study alone. Plus, study groups keep you accountable to a group and provide support from fellow nursing students who are going through the same things you are.

Nursing school is difficult, and it can be even more challenging when you don't understand something. Be sure to ask for help when you don't know something, rather than waiting until you get behind. Instructors are more than happy to help, and they can also direct you to other resources that may be helpful for [nr505 61331 week 5 research summary assignment](#).

Another great tip is to complete the pre-class prep (if available). Most instructors will offer readings or worksheets prior to class that cover the content you'll be learning in the course. This can help you feel more prepared for the lecture and will prevent you from cramming before your exams.

3. Break Your Study Down

A big mistake students make is trying to shortcut the study process. For example, skipping readings before class or simply studying during lecture misses the opportunity to learn in different modes (reading and listening) and to take advantage of the benefits of distributed practice and repetition. Instead, break your study down into a series of set sessions, and schedule them in your calendar to avoid missing them.

Help your nursing students master course concepts and prepare for the next round of exams with Lippincott CoursePoint for Nursing [NRS 493 PICOT Question Paper](#) Concepts. It's the only integrated digital course solution that offers powerful, evidence-based content from Wolters Kluwer, customizable learning experiences, and powerful data.

4. Make a Schedule

Students will practice nursing and science concepts through the use of supplemental readings, class materials, practice questions and other online resources. Having the ability to review this content outside of class hours will allow them to truly grasp and apply the information and make it more [BUS FPX3012 Assessment 1 Western Medical Enterprises Application](#) ingrained in their minds for the next round of exams.

One of the most important things for nursing students to remember is that they are not alone. If they are struggling, they should reach out to their instructor or a study group. Failure to seek help could lead to falling further behind or doing poorly on future quizzes and tests.

It is also essential for students to find activities outside of school that they enjoy and can give them a break from studying. This will help to keep them focused and remind them that they have a life that can be enjoyed!

5. Take a Break

It can be easy to get lost in the details when studying nursing school. There is a lot to cover: reading assignments, outside resources, and class lecture notes. It can feel like a full-time job just keeping up with everything!

However, a study schedule can help you keep up with everything. It can also promote retention compared to cramming the night before an exam. It is also important to find time for activities outside of study, such as hanging out with friends or watching a movie. Exercise is another great way to decompress and remind yourself there is life outside of nursing school.

Finally, it is essential to seek help when needed. Not seeking assistance can lead to a lack of understanding that may ultimately result in a failed course or NCLEX score.
